

Robopaw

SERIES 1 · FACT SHEET · CONFIDENTIAL

What it is

AI-powered robotic companion dog for working parents. Real-time monitoring, screen-free engagement, and sub-10-second safety alerts — all processed on-device. Not a nanny cam. Not a tablet. An extra set of eyes that never blinks.

Boilerplate

Robopaw AI Systems is a pre-launch robotics startup building the first AI-powered companion designed specifically for child safety in the home. Founded in 2026 by Adrian E. and Norma S., Robopaw combines on-device SLAM navigation, thermal health monitoring, and sub-10-second emergency alerts. The company is accepting waitlist registrations ahead of Series 1 hardware launch on January 6, 2028. All sensitive data is processed on-device — no video, audio, or biometric information is stored in the cloud.
